

to DOCIP

Traditional knowledge shouldn't be considered only as a folklore, but also ^{as a system of skills & competence} to preserve ecosystem & biodiversity & to live in friendship ^{with nature}.
I saw an example of protection the unique natural site which located in Russia & Lithuania. This is a "Curonian spit".
The local activists are protecting this spit from erosion & destruction ~~due~~ (which is a result of climate changes) by old traditional tools & approaches which used to be implemented for centuries by local people. And now it is almost the ^{or ins.} Thus, returning back to ~~my~~ consideration of positive practices worked out by IP & local communities:
~~I am calling indigenous NGOs to communicate actively with state authorities & societies in interest to introduce positive traditional experience in preserve ecosystem & biodiversity.~~

(*) I am calling all parties in interest (IP NGO, state authorities & academics) to analyse and introduce best ^{traditional} practices in a system of preservation the ecosystem & biodiversity & support ~~application~~ implementation of traditional ~~tools~~ on regular basis.
